SUMMARY

I'm customer service representative professional with more than 3 years experience in banking industry. However, I never meant to go into this industry. It wasn't my intention when I was looking for my first job after graduation. It's important to know your interest before going to any career field. I have a solid math background since my major in college was mathematic. And I saw the possibility of me working on web development. So now I am seeking a opportunity to do the entry level coding as developer in the tech industry.

I always have interest in computer science, after 3 years working at banking industry, I would like to try something new, something that I will enjoy to keep working on it. So I got into the UW Coding Bootcamp program to start learning coding. And this program not only helped me how to use web tools coding and also we have complete some projects that I can get into know how to collaborate with other developer via slack and GitHub.

I like studying and experience new techs, so I think the coding job fits me well, I'm quite suitable for this industry.

SKILLS
